

WAR IN UKRAINE (2)

ASF - IHP MEDICAL KITS ARE NOW BEING USED IN UKRAINE

Thanks to the activation of ASF's Rapid Response Mechanism earlier this month, 59 Essential Health Packs (EHP) worth €132,954 are delivered and used in Ukraine by the NGO *Project HOPE*. ASF sections FR-BE-CH-USA-UK took part in this effort.

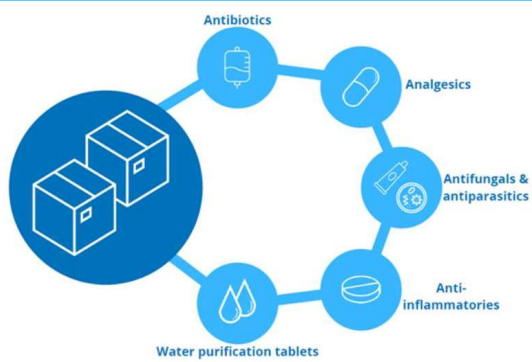

As confirmed by UN Office for the Coordination of Humanitarian Affairs (OCHA), medical kits of this type are among the most urgent needs to respond in the most adequate way to the humanitarian crisis as it prevails today inside Ukraine.

Since the activation of the RRM the number of civilian casualties has tripled and the amount of refugee has increased tenfold. International Health Partners is thus preparing a second batch of EHP with additional medicines for people suffering from diabetes, hypertension etc., for whom it's vital that treatment is not stopped

What is an EHP?

An Essential Health Pack (EHP) is a pre-packed kit comprising two boxes. It's filled with a range of medicines essential to support critical primary health care delivery in any setting. Packs are highly durable and portable and can be transported wherever they are needed to act as a mobile pharmacy.
